Department of Electrical and Computer Engineering
University of Waterloo

April 6, 2023

The exam is based on material we have covered in the lectures & labs.

The exam is cumulative: covers from the first lecture to the last.

Lab material you are expected to know covers all projects

How to prepare for the final exam:

1. Review lecture notes, slides, and videos.
2. Understand your lab solutions.
3. Try old exams.
4. Ask questions in Piazza if you need.

The exam will take place according to the registrar's office schedule.

We'll have an alternate plan if the exam has to be online:
    This would be a take-home exam with a 24h window.

Exam Layout

The exam will be 50-60% written questions; the rest programming questions. The programming part is including pseudocode.

It should resemble the midterm exam in some ways.

The programming questions will resemble the labs and in-class examples.
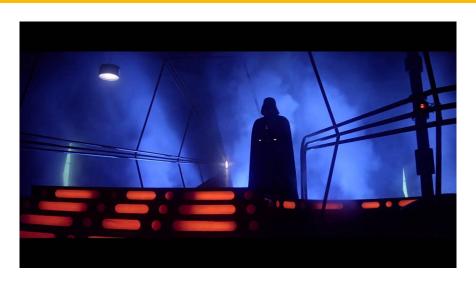

There will be no questions allowed during the exam.

If in-person, it's a closed book exam, with a reference sheet.

If online: you are expected to do the exam completely independently…
Treat it like a final exam.

"The Force is with you, young Skywalker…
    But you are not a Jedi yet."

Maybe, given where you are in the degree, this is more appropriate:
